ABOUT ME

I am an engineer by undergrad background, a newbie UX designer by choice with some experiences and a programming enthusiast by hobby. To create experience or products, I follow the approaches problem-solving, sequential execution of steps and also the process human-centric design. Curiosity, persistence, assiduousness and perfection define me. Currently, I am pursuing a Masters in Information Technology, taking User Experience as the major to learn it more deeply from a structured academic perspective.

EDUCATION

MS in Information Technology

Tampere University

Aug 2018 – present Tampere, Finland

B.Sc. in Electrical and Electronic Engineering

Leading University

May 2013 – Sep 2017 Sylhet, Bangladesh

WORK EXPERIENCE & TRAINING

User Experience Designer

IT Orchid www.itorchid.com

Feb 2015 – present Sylhet, Bangladesh

Have been doing user research, finding users' needs, sorting out problems and solving them. The range of the working area is pretty wide. Here, I am assigned specially to develop the web interface of the applications.

Front-end Web Developer (Intern)

BDSOURCE www.bdsorce.net

Mar 2013 – Apr 2013 Sylhet, Bangladesh

Learned HTML, CSS, Web template designing with Adobe Photoshop in this firm and took part in doing part of projects.

Trainee

TICI (Training Institute for Chemical Industries)

www.tici-bcic.org

Jul 2016 – Aug 2016 Dhaka, Bangladesh

Got industry standard, practical training on the major courses of the undergrad (Electrical and Electronic Engineering).

A DAY OF MY LIFE

TOP PROJECTS GLIMPSE

Online Magazine: www.monthlytarunno.com

Designed first Bengali college-centric online literary magazine. Researched and identified the loopholes throughout the designing phase, planned the workflow, validated the project through iterations with the help of real stakeholders.

Startup: www.electrovabd.com

Being the only designer, took the responsibility to develop a website which supposed to have all the feature products and services of the company Electrova. Integrating e-commerce on the website was a future task. The first phase of work is done there and the second phase is pending.

Portfolio: www.sanwar.me

Designed and launched a website of a freshly graduated student who wants to present himself through his own website. Researched the background, interviewed the person, wrote up the contents. Last but not least, made a blog layout for the client.

Educational Community: www.lu-ec.org

Holding a leadership position in the organization Leading University Electronics Club, took the responsibility of doing everything of this project. Interviewed the club authorities and some of the real users, understood their need and expectation, developed and compiled the contents, completed the project with a sense of happiness as I myself was part of that club.

Social Organization: www.lussc.org

Another club named Leading University Social Services Club became interested when they found that the club LUEC in the same university has their own website. So, to do the project I followed the whole process of the earlier project (LUEC) and designed a website for them.

Youtuber: www.studywithanis.com

Interviewed the owner, also the subscribes of the channel, researched the type of contents the owner makes and made a plan to develop experience. The owner Anis teaches people programming in the Bengali language on his channel where he has almost a hundred thousand subscribers. Some features are yet to be implemented.

Dentist: www.atmbahar.com

Researched the background of the client, prioritized the needs, implemented those needs sequentially, some are in pipeline yet. Designed the site in such a way that in future it will not collide with if some futures like e-commerce, booking system etc. are integrated. For now, this (still under development) site is just to present a young dentist.
